

Tirando la onda a la escala 1/1

Drawing scale 1/1 "prestige"architectural plans to generate interferences in the city of Chihuahua.

October 2010
Chihuahua [Mx]

Length: 3days [15hours]

Students: 85(p)

Client: Instituto Tecnológico II de Chihuahua [TECHII]

Aims: urban action, participation, 1/1 scale.

Formats: floor draws.

As students of architecture or architects we spend most of the time drawing from our computer or in front of a leaf of paper without at least the sight not even going back to the city. In addition, our capacity is already declared "mytho/maniac" that makes us adore the Farnsworth House or the villa Rotunda as classic untouchable of that to learn "Architecture", looking at them from abstract documents (plans, sections, gatherings ...), from very distant scales of the reality.

Can we invest these two variables?.

Why **NOT TO SIMULATE** our "adored" architectures as way of **ACTIVATING** different points of Chihuahua's city?.

Por qué no tirarle la onda a la escala 1:1?
